

EDUCATION

B.E. in Computer Science and Engineering, VIT Chennai2021 – 2025

CGPA: 8.5

EXPERIENCE

Sola AI

Remote / GitHub / Live

December 2024 – Present

Founder / Developer

- Built an open-source voice assistant that turns natural language into Solana transactions, integrating 10+ protocols and 20+ onchain actions (swaps, LP, staking, account ops).
- Implemented an intent parsing and routing layer that enforces signer requirements, program interfaces, and state preconditions before submission, achieving 90% end-to-end transaction success across supported flows
- Onboarded 500+ users during initial launch and developed further executions based on real transaction failures and usage patterns.
- **Tech:** Rust, TypeScript, Django (Auth), Axum, PostgreSQL, Prisma, Solana Web3.js, Next.js

Orion Innovation

Chennai

Sep 2023 - Oct 2023

Software Development Intern

- Maintained AngularJS modules in a production sports league management platform, modifying state handling, form validation, and API integration logic.
- Developed scripts enabling data migration from PostgreSQL to MongoDB.
- Developed NFT based authentication and seat allocation prototypes for a live ticketing system using React (frontend) and Python (backend services).

PROJECTS

Gaslite

Live Url / GitHub

- Built an AI agent optimizing Solidity smart contracts for gas on Mantle L2 via RAG for YUL patterns and LLM code generation.
- Implemented a closed-loop refinement cycle verifying gas savings in a Foundry sandbox until tests pass.
- **Tech Stack:** Rust, Axum, Qdrant, Turso, DeepSeek, Foundry, Next.js

Strike

Live Url / GitHub

- Built a 5x leveraged prediction market on Sui (Move), engineering an atomic Margin Loop that abstracts borrowing, swapping, and position-opening into a single transaction.
- Designed a permissionless liquidation architecture utilizing an on-chain kinked interest rate model to dynamically calculate Health Factors and incentivize MEV keepers.
- **Tech Stack:** Move, Sui, DeepBook

StarkDev

Live Url / GitHub

- Developed and published a Rust CLI tool automating StarkNet development environment setup, achieving 2500+ downloads on crates.io.
- **Tech Stack:** Rust, Clap

OPEN SOURCE CONTRIBUTIONS

MindsDB & Rede:Implemented Shopify integrations, fixed Sendinblue payload bugs (MindsDB), and developed CLI extensions for filetype support (Rede).

TECHNICAL SKILLS

- **Languages:**Rust, TypeScript, Python, Move, Solidity, Yul
- **Web3 & Smart Contracts:**Solana (Anchor, Web3.js), EVM (Foundry), Sui, DeFi Architecture, Metaplex cNFTs, IPFS
- **Backend & Databases:**Axum, Django, PostgreSQL, Turso, Qdrant (Vector DB), Prisma, Docker
- **Web & AI Architecture:**Next.js, React, RAG, Agentic Workflows, DeepSeek

ACHIEVEMENTS

Winner:Router and Push Protocol track, Built a cross chain token gated chatapp on Polygon

Unfold 2023

Winner:Consumer Apps Track, Built a Fruit Ninja inspired game on Aptos, using gasless transactions

Build on Aptos 2025

Speaker:Delivered technical sessions at regional Solana events and campus workshops
